
4. FRACTIONS (1)

Score: / 14

Reading fractions:

Read the numerator first and then the denominator;

1. Read the denominator as an ordinal number.

   For example,

   $\frac{2}{3}$ is read as *two-thirds* $\frac{4}{7}$ is read as *four-sevenths*

Reading for denominators:

Denominator	Read as	Denominator	Read as
2	Half	11	Eleventh
3	Third	12	Twelfth
4	Quarter / Fourth	13	Thirteenth
5	Fifth	20	Twentieth
6	Sixth	30	Thirtieth
7	Seventh		
8	Eighth		
9	Ninth		
10	Tenth		

2. Using the word "over" between the numerator and denominator:

   For example,

   $\frac{14}{27}$: *fourteen over twenty-seven*

   $\frac{11}{13}$: *eleven over thirteen* $\frac{24}{53}$: *twenty-four over fifty-three*

Exercise – read with ordinal numbers

Read these fractions:

Question	Fraction	Read as
1	$\frac{1}{3}$	One-third
2	$\frac{3}{4}$	Three-quarters, three-fourths
3	$\frac{2}{5}$	Two-fifths
4	$\frac{5}{6}$	Five-sixths
5	$\frac{6}{8}$	Six-eighths
6	$\frac{5}{9}$	Five-ninths
7	$\frac{8}{10}$	Eight-tenths

There is at least one mistake in each question below. Write the correct reading for them.

Question	Fraction	Correction
8	$\frac{1}{2}$: one-second	A half
9	$\frac{2}{3}$: two-three	Two-thirds
10	$\frac{3}{5}$: fifths-three	Three-fifths
11	$\frac{4}{7}$: fours-sevenths	Four-sevenths
12	$\frac{5}{9}$: nineth-fifths	Five-ninths
13	$\frac{7}{10}$: seven-tens	Seven-tenths
14	$\frac{7}{11}$: seventh-elevens	Seven-elevenths
